Fish extraction - commercial fisheries (HOLAS 3)

The commercial landings data has been extracted from the Scientific, Technical and Economic Committee for Fisheries (STECF) Expert Working Group on Fisheries Dependent Information, and data for Russia was extracted from ICES annual reports from the Baltic Fisheries Assessment Working Group (WGBFAS).

Attribute specification and units:

ICESNAME: ICES rectangle code

t2016-2020: Annual landing value in tonnes

AVG: Average of landings per rectangle

Simple

Statement	<p>The commercial landings data has been downloaded from the Scientific, Technical and Economic Committee for Fisheries (STECF) Expert Working Group on Fisheries Dependent Information (https://stecf.jrc.ec.europa.eu/dd/fdi) in April 2022.</p> <p>Landing data were aggregated per species and year, for cscode / ICES rectangle. Other species than Cod, Sprat and Herring were excluded from the data. The value for each species and year is the weight of the landing in tonnes (original attribute: twghtl).</p> <p>Russian data was extracted from ICES annual reports from the Baltic Fisheries Assessment Working Group (WGBFAS) (https://www.ices.dk/publications/library). Data is reported by sub-division. Landing data was available for sprat and cod.</p> <p>Both datasets contain data for 2016-2020.</p>
